ABSTRACT:

PURPOSE: To obtain an external preparation for skin effective for improving chapped skin and preventing aging of skin, having excellently eliminating action on active oxygen, containing lactoferrin, an extract of malt root and/or an extract of MOKKA (fruit of *Chaenomeles sinensis*).

CONSTITUTION: This external preparation for skin contains 0.0001-10wt.% of lactoferrin which is glycoprotein with iron integrity and has antimicrobial action and 0.0001-10wt.% selected from an extract of malt root and/or an extract of MOKKA (fruit of *Chaenomeles sinensis*) as active ingredients. The extract of malt root is extracted from malt root of gramineous *Hordenum distichum* L. and the extract of MOKKA is extracted from of rosaceous *Chaenomeles sinensis* by using a solvent. These essential components are mixed with an ordinary base for an external preparation for skin and prepared into cosmetics such as milky lotion, cream, toilet lotion, pack, dispersant and cleaning agent and medicines such as ointment, cream agent and external solution. This external preparation for skin has extremely highly preventing effects on formation of lipid peroxides, inflammation, blackening, aging, etc., resulting from formation of active oxygen in skin by ultraviolet light and is useful for beauty culture and treatment.
